

Digital CCTV within your reach

Divar, the digital versatile recorder for
securing your world

Security Systems

Security you can rely on.

BOSCH

Divar, the versatile 'one-box' solution

The heart of your security infrastructure
Put the Divar Digital Versatile Recorder at the heart of your organization's security infrastructure, and enjoy the benefits of reliable, full-function digital video recording. Designed and manufactured by Bosch for stand-alone, cascaded and networked configurations, Divar gives the flexibility to provide the level of security coverage you and your customers need.

Everything you need

All the essential CCTV system elements are present. The built-in multiplexer and switcher controls and views 6, 9, or 16 cameras (including Bosch EnviroDomes, AutoDomes and pan, tilt & zoom cameras), and the full-function digital video recorder captures scenes at up to 50/60 images per second – with simultaneous recording and playback. Alarm- and motion-activated recording is standard, while smart motion search makes locating images of specific scenes simplicity itself. The Divar with internal DVD writer makes it very easy to archive or export recordings without the need for a PC. And even with all this powerful functionality, Divar is remarkably easy to use.

Evidence you can use

Divar records 'image authentication' data together with the images so that they cannot be altered in any way without the tampering being detected. This powerful video and data authentication eliminates concerns about using digital CCTV recordings as evidence in legal procedures. Important recordings can also be protected to ensure they are not erased or overwritten.

Divar:

- Is an integrated digital CCTV solution for managing, controlling and viewing up to 16 cameras
- Digitally records at up to 50/60 IPS and plays back simultaneously.
- Authenticates images for evidence
- Advanced search facilities, including smart motion search for easy retrieval of video
- Has a user-friendly Control Center for remote access to multiple Divars
- Can be expanded up to a 256 camera CCTV recording system
- Offers ATM/POS interface support
- Available with internal or external DVD writer for local archiving without the need for a PC

Local system expansion

Control flexibility

Divar is easily expanded for even more functionality. In addition to the standard front panel control, your Divar configuration can also be controlled using the intuitive Bosch IntuiKey keyboard.

Convenient storage time and archiving

Divar comes with built-in, high capacity hard disks of various capacities for storing images. For even longer storage, Bosch RAID5 disk arrays with a total of up to 17 Terabytes can be added. And for fast and easy local archiving on low-cost, high-capacity DVDs or CDs without having to connect to a PC, a Divar with internal DVD writer or an optional external DVD writer are also available. Storing images is quick, easy and cost-effective with Divar.

Build a system

It's straightforward to link up to 30 Divars together to build a system. And if you need fully centralized control, viewing and recording for up to 256 cameras, a Bosch Video Manager with up to 16 Divar units provides the answer. These configurations are ideal for larger applications such as industrial sites, multi-story buildings, prisons and shopping malls. An ATM/POS interface is also available to store transaction details in banking, retail, and other point-of-sale applications.

Fit Divar into your existing systems

Divar can be integrated into existing installations with conventional analog video matrices, such as the Bosch Allegiant system. Such systems offer integrated control and digital video recording for hundreds, and even thousands of cameras in applications like casinos, airports, and other large organizations.

Autodomes

Global system management via a network

Multi-user and multi-site solutions

For multi-site applications, Divar units are linked to each other and to a central control room via local area network (LAN), wide area network (WAN), or the Internet. Bandwidth limitation is built-in to ensure that streaming video will not overload your network.

Live viewing, recording and playback

System configuration, live viewing and playing back recordings can be carried out from a central location or anywhere in the network. Regardless of whether your organization encompasses a single building or many sites in several regions or even countries, Divar helps you effectively manage your security responsibilities.

Remote System Configuration and Maintenance

The configuration tool incorporated in the Control Center allows unparalleled system configuration and maintenance from any where in the world. Remotely configure, up and down load and store system parameters over the network. You can even access AutoDome and Dinion camera menus to configure and adjust settings without the need to go to site.

Multi-Divar control center

With the easy-to-use Bosch Control Center, users can view and control cameras from multiple Divars at the same time. Up to six users can view live and recorded images simultaneously from each Divar on the network, while normal local operation continues uninterrupted. Divar is fully password-protected to ensure that only authorized users can view and retrieve the recorded video.

The Bosch added value

Bosch is one of the world's foremost developers and manufacturers of security systems. All Bosch CCTV equipment is made to the very highest international quality standards. You have the reassurance of a full three-year warranty, free advance replacement program and the support of our worldwide service network.
