Flexible, Efficient Solutions

Security Escort is the premier wireless help-call system designed with the needs of both patients and staff in mind. This powerful system works over multiple buildings and multiple floors and is effective both indoors and outdoors.

The system is easily controlled through user-friendly software. The Central Console, which consists of one or two IBM-compatible computers, is where the system is maintained. Opportunities for user error are greatly reduced due to the ease of operation, adding to the reliability of the Security Escort system.

Constant Comfort

Once an alarm is triggered, Security Escort's state-of-the-art software gives you critical information quickly, in an easy to comprehend format at a Central Console. In addition to seeing the name and picture of the person assigned the transmitter, you will also see their medical history, condition, drug allergies and all other pertinent information that is in the database. A map shows where the alarm is originating and, throughout the duration of an alarm, the transmitter automatically resends the alarm signal every few seconds constantly updating the Central Console of the user's location.

Be sure you're providing efficient response to patient alarms by having staff use acknowledgment transmitters that communicate with the Central Console. When a patient alarm is responded to, a press of a button sends an acknowledgment that lets other staff members know the patient is being cared for.

When designated areas of a facility are available for patients to access, staff will benefit from Security Escort's Virtual Fence feature. In the system's software, administrators simply click and drag to create boundaries for each transmitter. A virtual fence is instantly created. When a patient goes beyond the designated area the system initiates an alert.

Providing health care is an around-the-clock job. Shifts begin and end at all hours of the day and night. Issue staff a personal transmitter and they'll feel safe no matter what time they arrive or leave your facility. The SE2 Series of personnel transmitters offers a wide range of options based on preference. The man-down feature automatically activates an alarm when the transmitter worn by the user is tipped past 60°.

When an event is initiated the system will send a signal to a pager indicating a room number, wing, patient's name, and more, so staff can respond quickly and efficiently. Easily integrated into most pre-existing CCTV systems, Security Escort covers both the visual and audio requirements of many applications including those of hospitals and other health care facilities.

Security Escort also keeps track of valuable assets. Simply attach an SE3401 Point Tracking Transmitter to the asset, such as an expensive piece of equipment. Just like the personnel transmitters, the point tracking transmitters each carry a unique code. Once entered into the database, all the necessary details about the equipment, including a picture, will appear on the Central Console display should an alarm be triggered when the item is removed.

Keeping track of patients, staff, valuable equipment and other assets is a daunting task. Comfort, efficiency and peace of mind are available at the touch of a button with the Security Escort wireless help-call system from Bosch Security Systems.

For more information on the Security Escort system and other security products, contact your authorized Security Escort dealer today.

The Alarm Screen instantly identifies user and location. Upon receipt of an alarm, the console software displays a map showing the location of the signal, indicated by the red circle in the map above. During an alarm event, the user's name, photograph and personal information are displayed on the screen which can include medical history, condition, drug allergies, age, height, weight, and more. In the case of equipment or other items, serial numbers and other identifiers can be displayed. After initial activation, the system also has the ability to track the movement of the person or item. Updated every 7 seconds, smaller circles indicate past locations. The alarm screen's user-friendly interface makes it easy to manage alarms and dispatch assistance quickly.

SE88 Watch/Pendant Panic Transmitters

- Once activated, sends an immediate notification of wearer's identity and location
- Can be worn like a watch, pendant or mounted to a permanent location
- Water resistant

SE3 Series Subscriber Transmitters

- Once activated, sends an immediate notification of wearer's identity and location
- Post alarm tracking and alarm map recall
- Key-chain attachment

SE2 Series Personnel Transmitters

- Once activated, sends an immediate notification of wearer's identity and location
- Allows user to test from anywhere within the protected area
- Man-down alarm

Features and Benefits of the Security Escort System

- Automatic alpha/numeric paging capabilities alert multiple transmitters and provide the alarm's location
- Secure your facility's valuables with the Security Escort Point Tracker System
- Auto-tracking resends the alarm signal every few seconds
- Continuously monitor a transmitter's location with Supervision Tracking
- Indoor and outdoor coverage including elevators and underground tunnels

- Built-in test mode reduces false alarms and assures reliability
- Simple one-button activation
- Security Escort can be integrated into most existing CCTV systems
- Variety of alarm signals available including sirens, flashing strobe lights and silent alarms
- Central Console displays pertinent information, including an image of the user
- State-of-the-art software provides flexibility and ease-of-use, reducing the likelihood of operator error
